linkedin.com/in/ozodjon | github.com/BEKJONS

Backend engineer (Go/Golang) with 2+ years building multi-tenant B2B SaaS and ERP systems. Co-founder and team lead of an AI-powered SaaS for U.S. heavy-duty truck repair shops: built its backend from the first commit and led its shift to AI SaaS with an in-app LLM assistant (tool calling, streaming, permission-checked actions).

EXPERIENCE

ItLegacy · Product Co-founder & Team Lead
Oct 2025 – Present

AI SaaS for U.S. heavy-duty truck repair shops: service orders, parts & POS, invoicing, finance, and CRM; live with U.S. customers.

- Co-founded the product and built its backend from the first commit (~90% of commits): Go, Fiber, MongoDB, Redis; **1,000+ API routes** over **130+ domain models**.
- Lead a **team of 4** (backend, frontend, QA): review and merge all PRs, plan and assign work, hired and onboarded engineers, work directly with U.S. shop owners, and make the final technical calls.
- Built the in-app AI assistant end to end (Go + React/TypeScript): OpenAI Responses API, an agent loop with **51 strict-schema tools** and SSE streaming; it turns invoice photos into draft POs, decodes VINs, and suggests reorders.
- Designed LLM guardrails: per-call Casbin and tenant re-checks, writes only via single-use user-confirmed cards, prompt-injection and output-leak defenses, and an atomic per-company monthly cost cap.
- Designed multi-tenant isolation and auth: tenant/company/store scoping down to repository lookups, Casbin RBAC with domains, Redis-backed JWT sessions with force-logout, login lockout, and rate limiting.
- Built the CRM and integrations: pipelines and deals, RingCentral calls and SMS with Whisper transcription, a unified inbox, Telegram bots (LLM-parsed requests, in-chat estimate approval), Gmail API invoicing, and a Fullbay importer.
- Built the real-time and delivery layer: an authenticated WebSocket hub, a Redis dashboard cache with singleflight, and CI/CD for backend and frontend (GitHub Actions, Docker, GHCR); run the AWS and DigitalOcean servers.

Noor · Backend Engineer
Jun 2025 – Oct 2025

PharmaCosmos · pharmacy-chain management system: inventory, sales, 1C sync, and payments (Go, Gin, PostgreSQL, Redis)

- Built most of the 1C integration and implemented Alif payments end to end, alongside existing Click and Payme flows.
- Refactored core modules, tuned slow SQL queries, and added Redis caching to heavily used endpoints.

Udevs · Backend Engineer
Dec 2024 – Jun 2025

Bonvi ERP (MBF) · mobile ERP app integrated with SAP Business One (Go, gRPC, Redis, RabbitMQ, Docker)

- Started as a trainee doing full engineering work; hired May 2025 and took over the departing project lead's work.
- Built gRPC and REST APIs connecting the app to SAP Business One, plus background services on Redis and RabbitMQ.
- Evaluated CockroachDB as a distributed SQL option and presented the findings to the backend team.

SmartAdmin.uz & ManageApp.uz · Co-founder & Backend Engineer (part-time startup)
Oct 2024 – Apr 2025

Two products built with a partner (Go, Gin, PostgreSQL, Redis, Docker)

- Built SmartAdmin's backend: a multi-company, multi-branch CRM (inventory, sales, purchasing, cash flow, debt).
- Built ManageApp's backend: social media post scheduling and Jira-style team task management.

SKILLS

Backend	Go (Golang), Go testing, Fiber, Gin, REST, gRPC/Protobuf, microservices, WebSockets, OpenAPI
AI/LLM	OpenAI API (Responses, tool/function calling, structured outputs, streaming), LLM guardrails, prompt engineering, vision document extraction, Whisper speech-to-text, LLM cost control
Data & messaging	MongoDB, PostgreSQL, MySQL, Redis, RabbitMQ, Kafka
Security	Multi-tenant isolation, Casbin RBAC, JWT, OAuth2, rate limiting, AES-GCM
DevOps	Docker, Docker Compose, GitHub Actions, GitLab CI, GHCR, Nginx, Linux, AWS (EC2), DigitalOcean
Integrations	Telegram Bot API, Gmail API, RingCentral, SAP Business One, 1C, Alif payments
Also	React, TypeScript, Python (scripting), Claude Code

EDUCATION

Tashkent State University of Economics · Bachelor's in Banking and Audit (part-time) · expected May 2028

Najot Ta'lim · Backend development course (Go)

LANGUAGES

Uzbek (native) · Russian (native) · English (B2)

HONORS

Mirzo Ulugbek Vorislari · national youth innovation contest: reached the national stage and presented a project to ministry officials
